

## **CFR Carpet Extractors Approved by Tandus Flooring**

Tandus Flooring®, one of the oldest and largest flooring manufacturers in the United States, has approved CFR's Pro 500 and Cascade 20 for use on their products.

Based on rigorous testing, CFR's Pro 500 featuring patented Moisture Controlled Technology recovered 93.7 percent of the solution applied to test carpets.

In that same testing, CFR's Cascade 20 recovered 97.2 percent of the solution applied, considered a very high recovery rate.

CFR stands for Continuous Flow Recycling. Unlike conventional extractors, these CFR systems recycle and filter water/solution so that it can be used up to seven times, while still effectively removing soils from carpets and fabrics.

The process can increase worker productivity considerably.

Both of the systems honored by Tandus Flooring include the patented, low-moisture atomization wand technology. Tests indicate this technology allows CFR units to collect as much as 50 percent more moisture than more conventional wands and extractors.

"This is a great honor," says Michael Schaffer, president of CFR and Tornado Industries. "Tandus is a fine organization and we value their thoughts on our machines and their evaluation criteria very highly."

The CFR system is marketed by Tornado Industries, a Tacony company, and is distributed by Tornado's network of distributors and manufacturer's reps around the country.
